SKILLS

Languages: HTML, CSS, JavaScript, TypeScript, Python, C++

Libraries & Frameworks: ReactJS, NodeJS, ExpressJS, TailwindCSS

Databases: MongoDB(Mongoose), SQL, Postgres, Prisma

DevOps: AWS (EC2, RDS, DynamoDB, S3, Lambda, ELB, ECS, Route 53, CloudFront), Jenkins, Ansible, Docker, Kubernetes, Kafka, Redis

Tools: Postman, Git, Github

EXPERIENCE

Autonoms | Co-Founder & Full Stack Engineer

Sept 2024 - Oct 2024

- Co-founded *Autonoms*, a digital agency focused on modern web development, UI/UX design, and SEO optimization for small to mid-sized businesses.
- Acquired and onboarded 4 clients within the first month through strategic outreach and personalized proposals.
- Generated ₹35,000 revenue in the first month by delivering high-quality digital solutions aligned with client goals.
- Led end-to-end delivery of 4 websites, achieving a 100% on-time project completion rate.
- Developed a reusable components, reducing development time by 50% across projects.

PROJECTS

Gorr | ReactJS, NodeJS, ExpressJS, TailwindCSS, Postgres, Prisma, S3, ECS, ECR, Docker, Redis, SocketIO [Live](#) | [Code](#) | [Video](#)

*GORR is a sophisticated **deployment platform** built using a microservices architecture, designed to handle a project*

Deployments with real-time monitoring and efficient resource management.

- Built a deployment platform with 5 microservices for API, builds, monitoring, and custom domain routing.
- Leveraged AWS ECS, ECR, and S3 for containerized builds and web application hosting.
- Implemented real-time monitoring via Socket.IO and Redis pub/sub with 100% build visibility.
- Containerized build microservice for parallel execution, reducing main server load.
- Created an intelligent proxy system handling complex routing patterns for various frameworks.

Heimdall | ReactJS, NodeJS, ExpressJS, TailwindCSS, Postgres, Prisma, EC2, Docker, Redis, Nodemailer [Live](#) | [Code](#) | [Video](#)

*Heimdall is a **ping and uptime monitoring platform** that prevents cold starts on free backend hosting services*

(like Render, Railway, Fly.io) and tracks detailed performance metrics via a developer dashboard.

- Build a ping & monitoring platform with 6 microservices for API, job queue, workers, worker load balancer, and alert.
- Minimized 30–50s cold start delays by scheduling periodic pings to backend servers with customizable time.
- Stored detailed ping metrics: response time, HTTP status, uptime, and memory usage for historical tracking & analysis.
- Developed an interactive dashboard to visualize uptime percentage, latency trends, server statistics, and ping history.
- Implemented auto-scaling job processing using BullMQ and Redis, with dynamic concurrency control and email alerts for recurring server failures.

EDUCATION

Marathwada Mitra Mandal's Institute of Technology, Lohegaon

BE Computer Engineering

CGPA: 7.2

Pune, India

2023–2027

Kendriya Vidyalaya NO.1 Ahmednagar

12th Science (PCM)

Ahmednagar, Maharashtra, India

2020-2022

CERTIFICATIONS & ACHIEVEMENTS

- Awarded the '0-100' certificate in the 100xDevs program, mentored by Harkirat Singh.
